INDEX TO ASSESSMENT REPORTS, PUBLICATIONS, OPEN FILE REPORTS AND OPEN FILE MAPS FOR 1987

INTRODUCTION

Report 88-2 is a bibliographic index to all the Nova Scotia Department of Mines and Energy assessment reports, publications, open file reports and open file maps that became available during 1987.

Previously published volumes of indexes to assessment reports include Report 81-4 Index to Assessment Reports 1864 to 1980 and Report 86-2 Index to Assessment Reports 1981 to 1985. Previously published volumes of indexes to publications, open file reports, open file maps and theses include Report 81-6 Index to Publications, Open File Reports and Theses 1862 to 1980 and Report 86-4 Index to Publications, Open File Reports, Open File Maps and Theses 1981 to 1985. Report 87-3, published in 1987, is the first of the next series of annual indexes covering the period 1986 to 1990, and is titled Index to Assessment Reports, Publications, Open File Reports and Open File Maps for 1986. Report 88-2 is the second index in this series.

All the assessment reports cited in this index have been microfilmed and can be consulted in the libraries of the Halifax and Stellarton offices of the Department, where they are filed on the basis of their report numbers. Microfiche copies of these reports (except OFFSHORE reports with COGLA numbers) can be purchased directly from Precision Microfilming Services, 6100 Young Street, Halifax, Nova Scotia, B3K 2A4 (902-455-5451). If ordering microfiche copies of assessment reports, please quote the full assessment report number e.g. AR OFFSHORE 82-001, AR 85-001 etc.

OFFSHORE reports with COGLA numbers (e.g. 8611-M3-1-1) were obtained on microfiche from the Canadian Oil and Gas Lands Administration, 355 River Road, Ottawa, Ontario K1A 0E4 (613-993-3760). These reports can be consulted

on microfiche in the Halifax library of the Department, and can be ordered directly from COGLA.

Purchase of the offshore reports from COGLA has necessitated changing the report numbers on the offshore petroleum reports that were cited in the previously published index Report 86-2 Index to Assessment Reports 1981-1985, because the COGLA microfiche reports often contained more than one individual NSDME report. Consequently, the offshore petroleum reports cited in Report 86-2 have been reorganized and renumbered to reflect the COGLA reports, and have been republished with their new report numbers in this index. Users should, therefore, use only the new report numbers cited in Report 88-2 and not the old numbers cited in Report 86-2.

All the publications, open file reports and open file maps cited in this index can be consulted in the libraries of the Halifax and Stellarton offices of the Department. All the publications can be purchased from both departmental libraries, and microfiche copies of open file reports and open file maps can be purchased directly from Precision Microfilming Services.

INDEX ORGANIZATION

Report 88-2 is seven separate indexes under one cover, namely: an index to Nova Scotia Department of Mines and Energy onshore exploration assessment reports (PART I); an index to Nova Scotia Department of Mines and Energy offshore exploration assessment reports (PART II); an index to Nova Scotia Department of Mines and Energy publications (PART III); an index to Nova Scotia Department of Mines and Energy open file reports (PART IV); an index to Nova Scotia Department of Mines and Energy open file maps (PART V); an author and company index to the assessment reports, publications, open

file reports and open file maps (PART VI); and an NTS map index to the publications, open file reports and open file maps (PART VII).

PART I Onshore Assessment Reports Index

The Onshore Assessment Reports Index is an index to all the onshore mineral and petroleum exploration assessment reports that became public information during 1987. The onshore index also lists several offshore assessment reports that include a land component with an NTS map reference, such as reports on Sable Island.

Assessment reports are assigned a sequential, five digit report number (e.g. AR 85-001, AR 85-002 etc.) which reflects their year of receipt in the Department. In the case of offshore reports, the five digit number is preceded by the word "OFFSHORE" (e.g. AR OFFSHORE 82-001).

The Onshore Index is organized on the basis of the Nova Scotia Department of Mines and Energy claim reference map system. The claim reference map system (Fig. 1) is used by the Nova Scotia Department of Mines and Energy for map staking of mineral exploration claims. This claim reference map system is based upon the National Topographic System (NTS), whereby each claim reference map is one-quarter of a standard 1:50 000 NTS map. For example, NTS map 11D/05 consists of claim reference maps 11D/05A, 11D/05B, 11D/05C and 11D/05D, these maps being lettered in a clockwise direction from the southeastern corner of NTS map 11D/05.

PART II Offshore Assessment Reports Index

The Offshore Index is an index to all the offshore mineral and petroleum exploration assessment reports that became public information during 1987. The offshore has been divided up into a number of distinct geographic regions (e.g. Banquereau Bank), and the reports

are organized alphabetically by geographic location. The geographic location names used are those illustrated on Canadian Bathymetric Chart Bay of Fundy to Gulf of St. Lawrence (Department of Energy, Mines and Resources, Ottawa, 1969). These geographic location names are listed in Table 1 and illustrated on Figure 1.

Some offshore reports describe exploration work that was conducted on offshore islands (e.g. on Sable Island). References to such reports can be found both in the Onshore Index (PART I) under the appropriate Claim Reference map sheet, and in the Offshore Index (PART II) under the appropriate geographic location.

PART III Publications Index

The Publications Index lists the titles of the various Nova Scotia Department of Mines and Energy published documents that became available during 1987, namely: annual reports, information circulars, information series, papers, miscellaneous publications, published maps, reports, reports of activities, and reprints. The titles are sorted alphabetically by document type, and are sub-sorted chronologically from oldest to most recent within each document type category.

PART IV Open File Reports Index

The Open File Reports Index lists the titles of unpublished documents, concerned with the geoscience of Nova Scotia, that were generated or collected by the Nova Scotia Department of Mines and Energy during 1987. Open file reports (OFRs) can be authored by any individual, agency or organization. Open file reports do not necessarily originate from within the Nova Scotia Department of Mines and Energy, although many do. Open file reports are assigned a sequential, five digit report number (e.g. OFR 87-001, OFR 87-002 etc.) which reflects their year of generation or receipt in the Department.

PART V Open File Maps Index

The Open File Maps Index lists the titles of unpublished maps, concerned with the geoscience of Nova Scotia, that were identified, generated or collected by the Nova Scotia Department of Mines and Energy during 1987. Open file maps (OFMs) can be authored by any individual, agency or organization. Open file maps do not necessarily originate from within the Nova Scotia Department of Mines and Energy, although many do. Open file maps are assigned a sequential map number (e.g. OFM 87-001, OFM 87-002 etc.) reflecting their completion date. The final page of the Open File Maps Index contains references to two maps whose numbers are ND-213 and ND-214. It was impossible to obtain a definitive completion date for these maps, hence the "ND" (for "No Date") in the date part of the OFM number.

PART VI Author Index

The Author Index is an alphabetic listing of all the authors cited in the publications, open file reports and open file maps indexes in PARTS III, IV and V. Included in this author index are also the names of exploration companies and exploration licence holders from the Assessment Reports Indexes, but not the names of the personal authors of these reports. When a document has no personal author it is cited under the originating agency or institution. If both the personal name and agency name are unknown, the document is cited under ANONYMOUS.

PART VII NTS Map Index

The NTS Map Index is a hierarchical, geographic index to the publications, open file reports and open file maps listed in PARTS III, IV, and V. It is organized on the basis of the National Topographic System (NTS) of map sheets for Nova Scotia (Fig. 1). The NTS map sheet assigned to a document or map reflects the geographic location and

extent of the document or map in Nova Scotia. Consequently, a 1:1 000 000 map quadrangle (e.g. map 11), a 1:250 000 map quadrangle (e.g. map 11D), a 1:125 000 map quadrangle (e.g. map 11D/NE), a 1:50 000 map quadrangle (e.g. map 11D/10), or a Claim Reference map (e.g. map 11D/10A) may be assigned to a particular document or map. Documents which are very general and province-wide in their geographic extent have been assigned an unofficial NTS map value "NOVA SCOTIA". Within any one NTS map division the titles are sub-sorted chronologically from oldest to most recent. Documents which describe work conducted offshore from mainland Nova Scotia have been assigned an unofficial NTS map value "OFFSHORE", in order that they may be conveniently grouped together in the OFFSHORE section of the NTS Map Index.

GEOSCAN

Report 88-2 was generated from GEOSCAN, which is a bibliographic database providing access to publicly available geoscience literature concerning the Canadian landmass and offshore regions. The database is co-operatively produced from the indexing contributions of fifteen federal, provincial and professional geoscience organizations located throughout Canada. The Geological Survey of Canada co-ordinates these indexing activities and provides computer resources in support of GEOSCAN. The Nova Scotia Department of Mines and Energy is an active participant in GEOSCAN, and specific search enquiries and custom indexes can be generated upon request from GEOSCAN, using on-line terminal connections in the Halifax office, or through the National GEOSCAN Centre, Geological Survey of Canada, in Ottawa.
